GOAL IN ONE

TEN REDESIGNED LEVELS

Visual blueprints + structured implementation data

DESIGN PHILOSOPHY

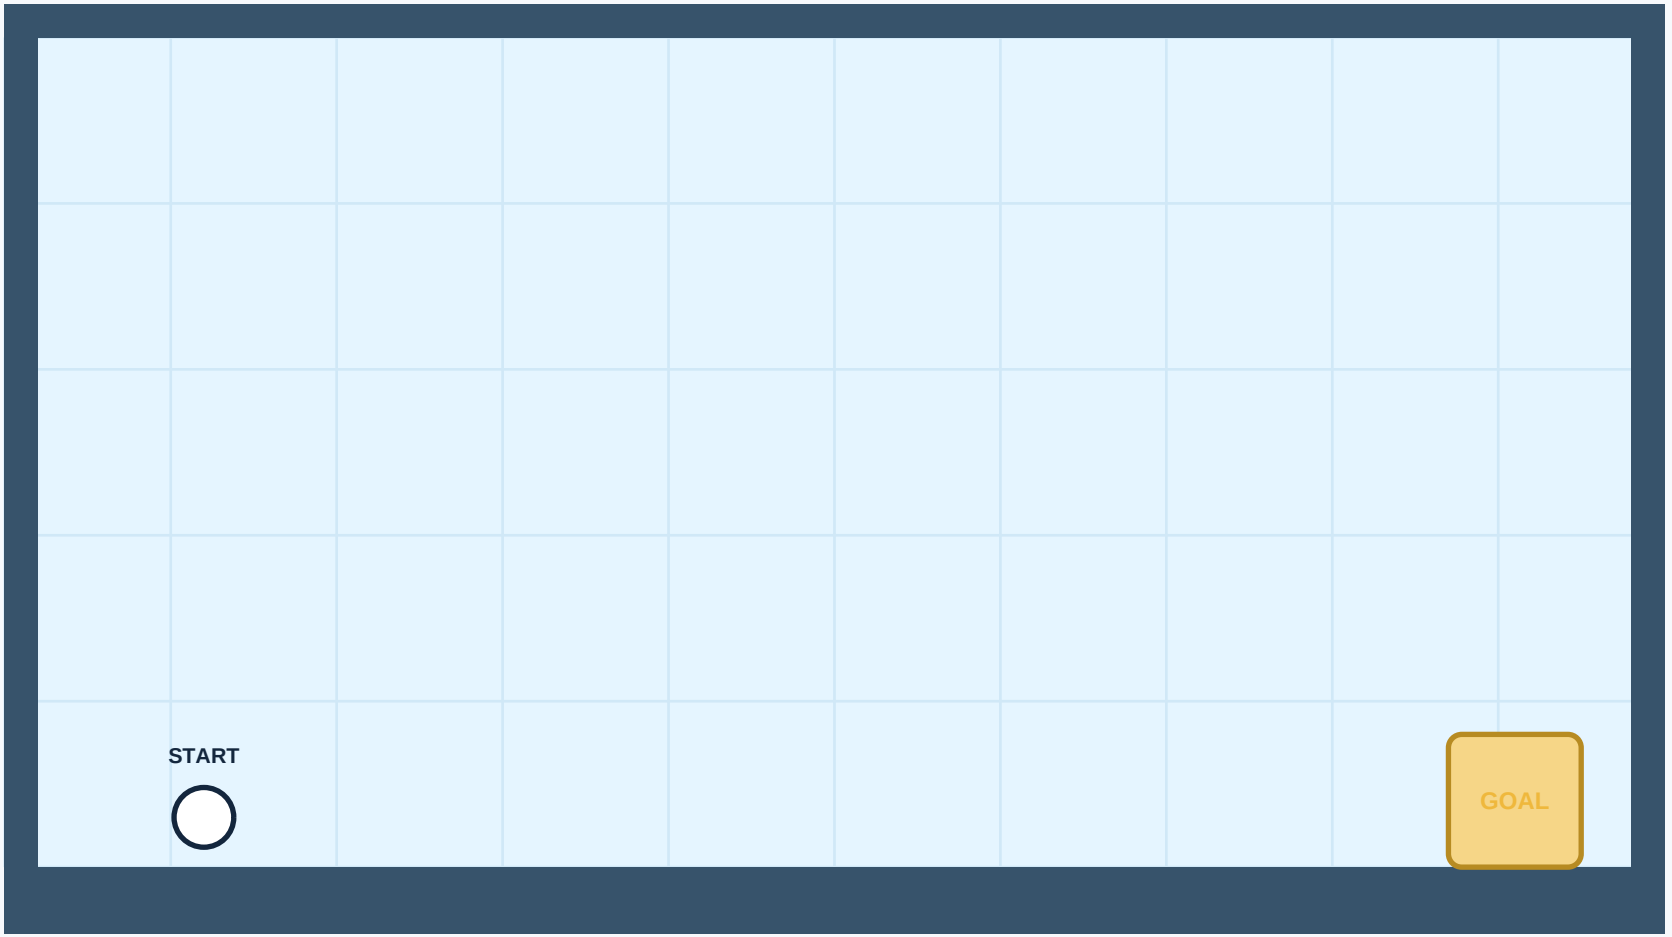
1. Teach one mechanic at a time, through geometry rather than instructions.
2. Build from success to small obstacles, hazard awareness and timing.
3. Introduce forward, backward and red ball-loss pads individually.
4. End with short combinations and a memorable chapter-finale level.
5. Preserve unlimited kicks, mid-flight kicking and instant restart.
6. Reward clean routes through par-based stars rather than restricting play.

IMPLEMENTATION WARNING

These are detailed level-design specifications, not physics-validated solutions. Codex must inspect the existing game, translate the geometry to its engine, complete every level through playtesting and tune objects, forces and par.

LEVEL 01 / FIRST TOUCH

NEW: Aim, set power, kick | Provisional par: 1 kicks | Difficulty: Very easy



INTENDED PLAY

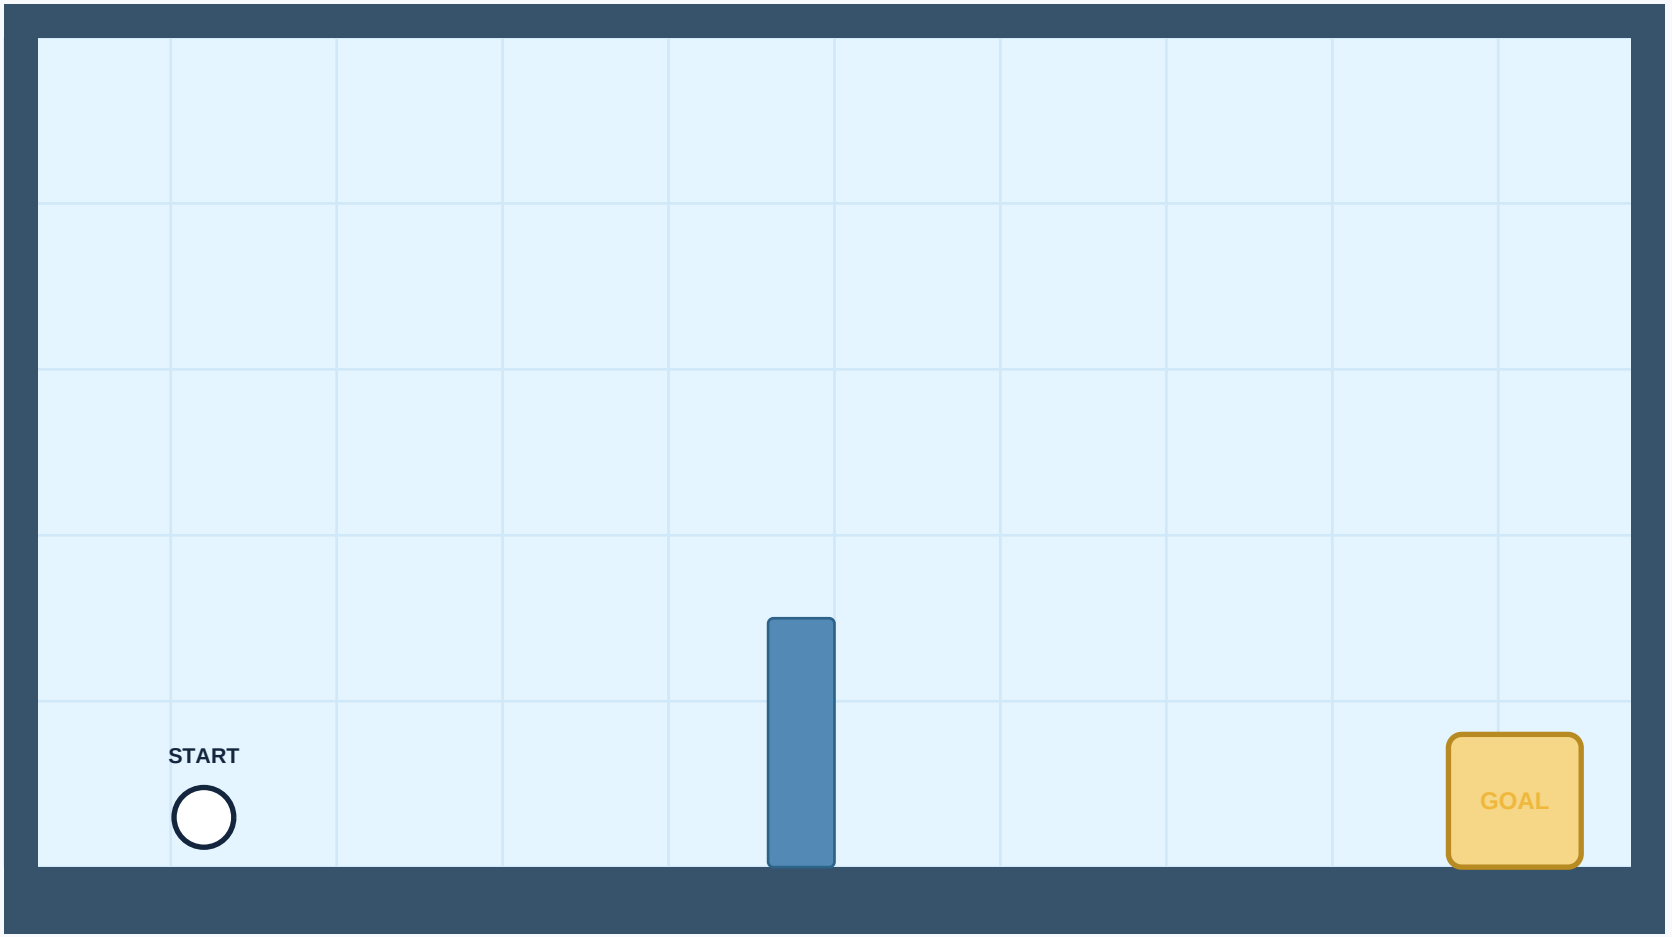
A single clean, obvious shot reaches the goal. The first successful kick should feel immediate.

DESIGN CHECK

First-time player understands controls without a text wall.

LEVEL 02 / THE LOFT

NEW: Arc over a wall | Provisional par: 1 kicks | Difficulty: Easy



INTENDED PLAY

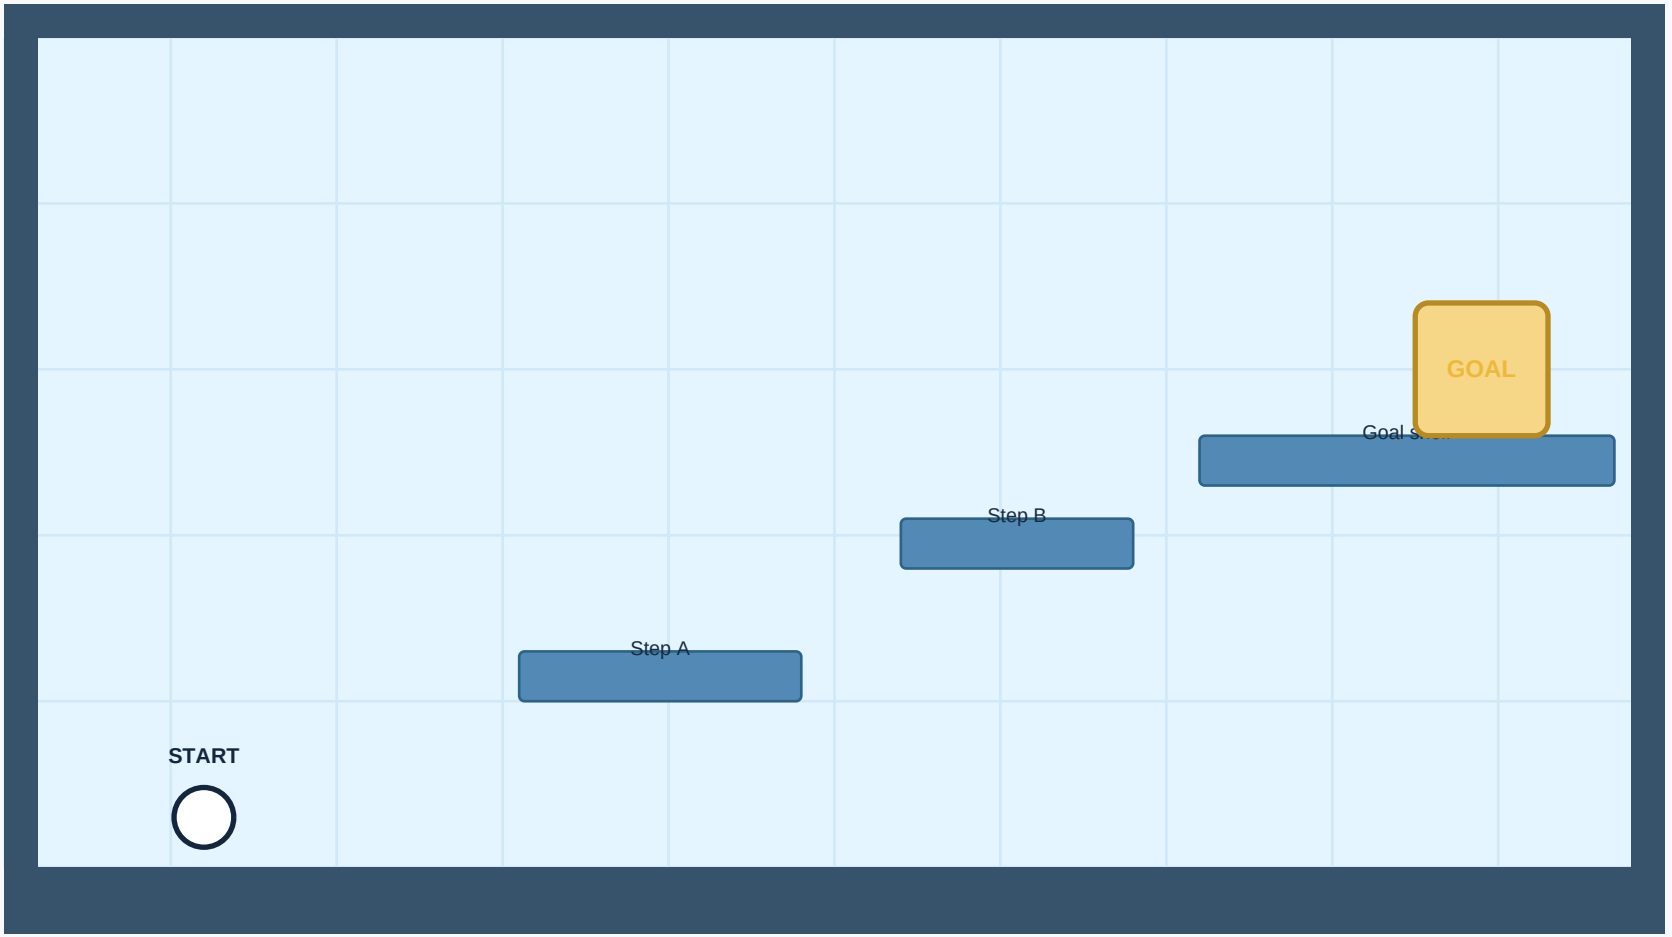
One well-aimed high arc clears the central wall. Additional kicks remain legal.

DESIGN CHECK

A one-shot solution must be achievable without pixel-perfect aiming.

LEVEL 03 / HIGH GROUND

NEW: Raised goal and stepped platforms | Provisional par: 2 kicks | Difficulty: Easy



INTENDED PLAY

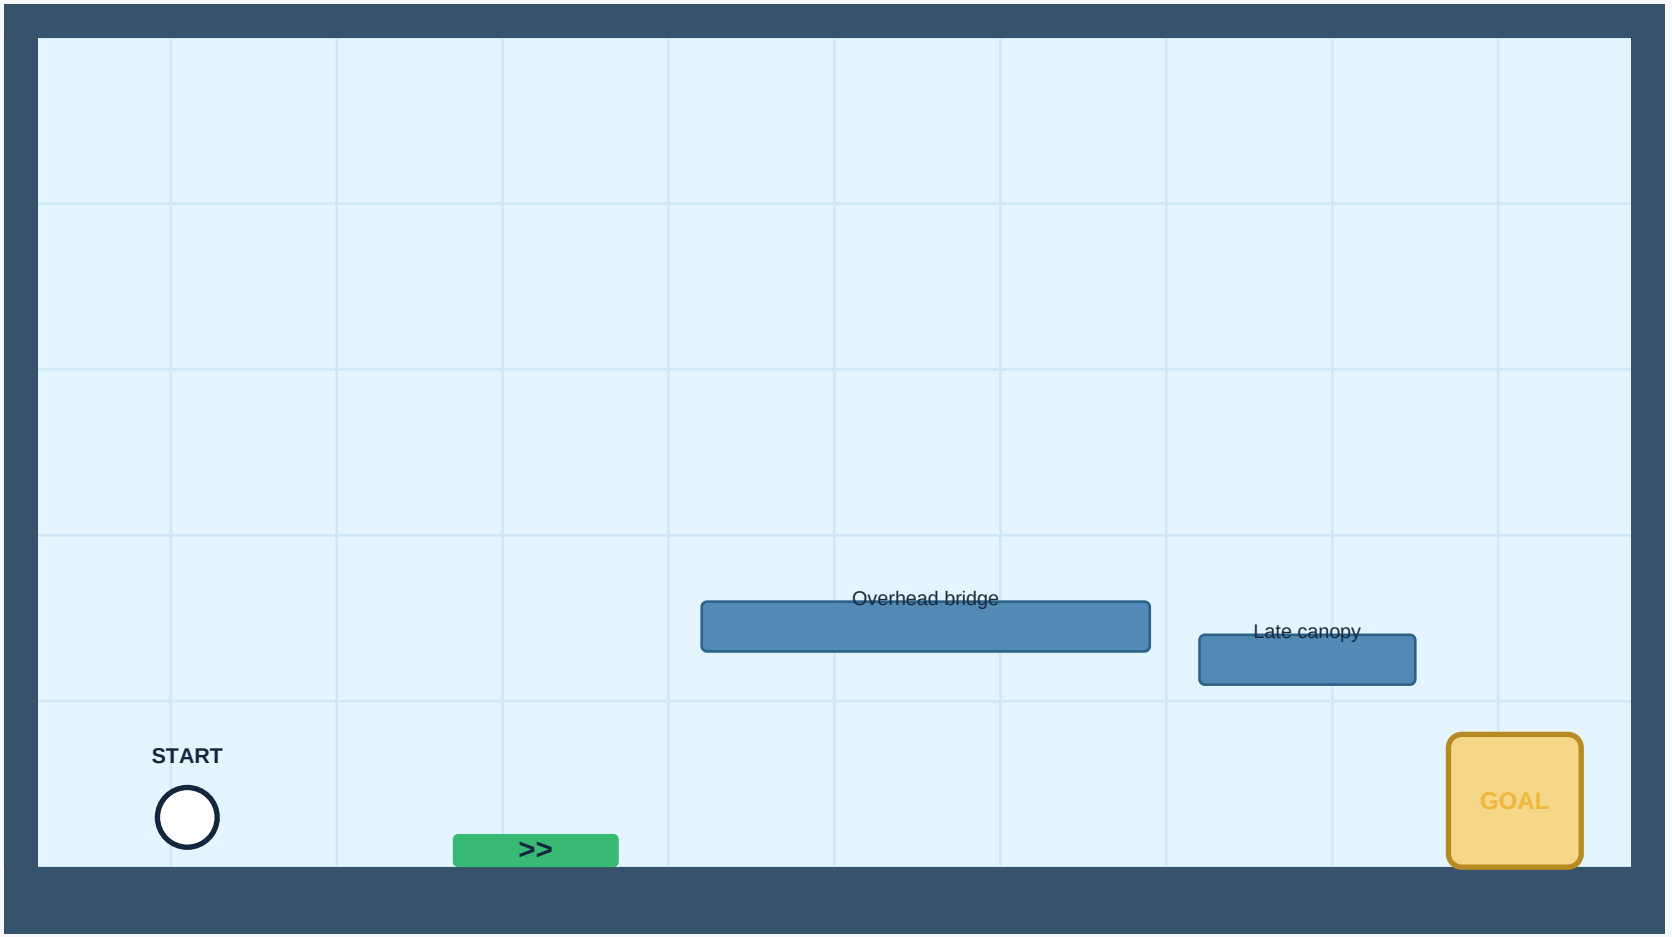
Use a rising sequence of platforms or an impressive single long arc; reaching the raised goal is the puzzle.

DESIGN CHECK

No ball-trapping corners; two-kick path should be forgiving.

LEVEL 04 / FAST LANE

NEW: Forward boost pad | Provisional par: 2 kicks | Difficulty: Easy



INTENDED PLAY

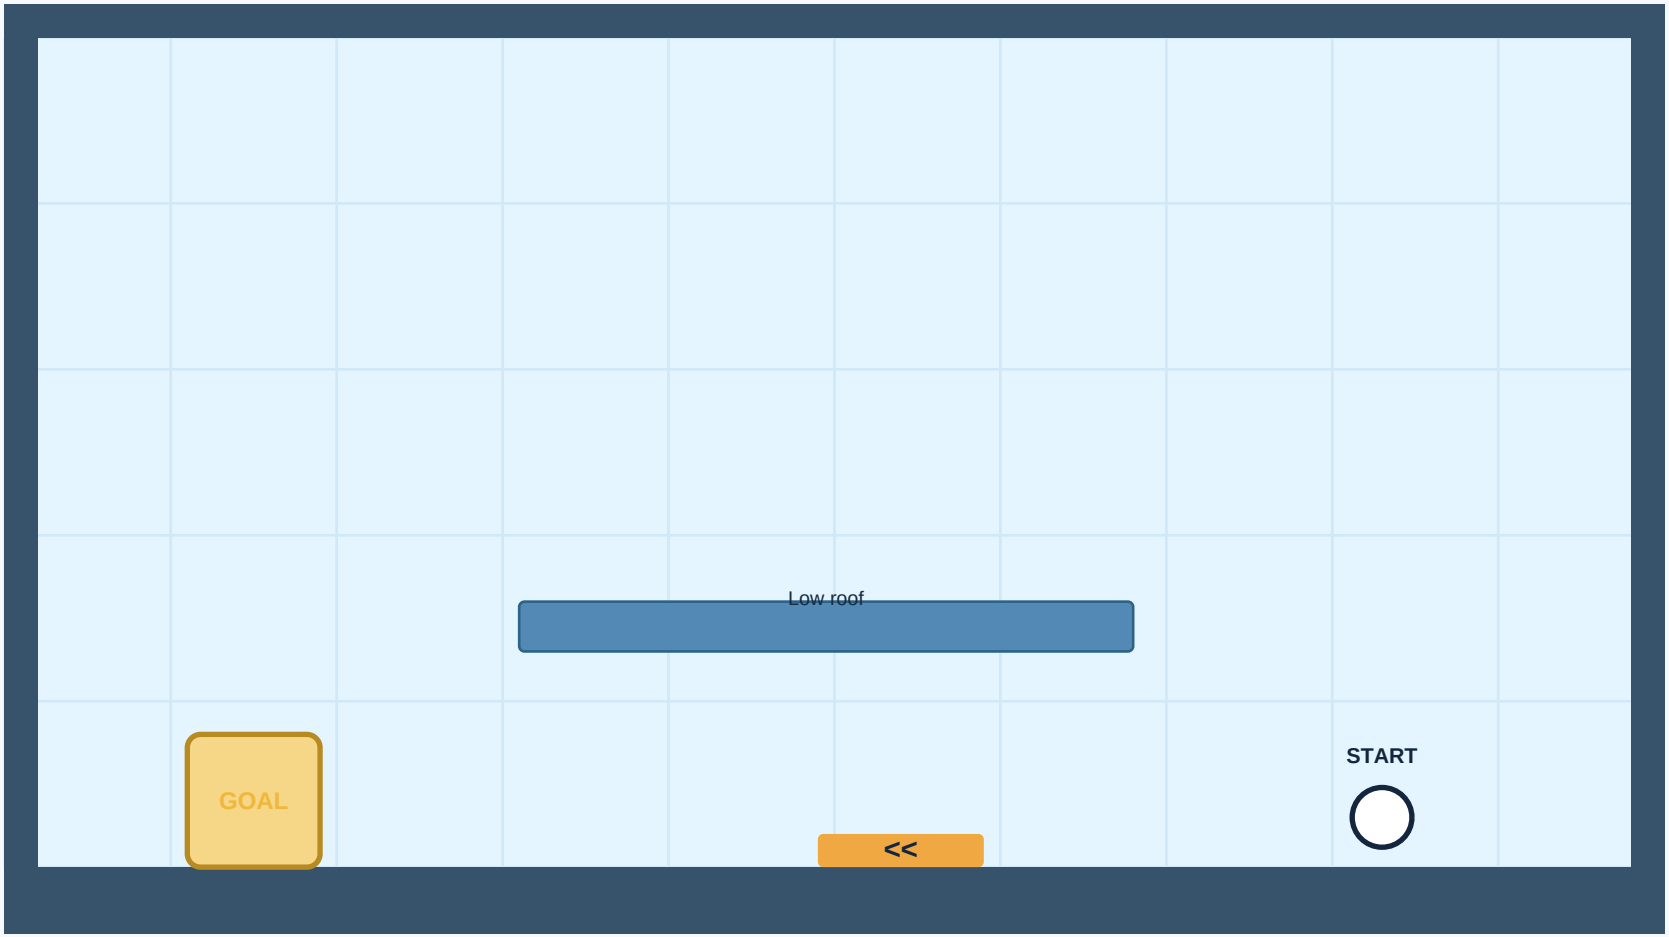
Roll or kick onto the green pad to accelerate under an overhead canopy, then direct the ball into the goal.

DESIGN CHECK

The boost must be noticeable but not so powerful it causes unavoidable ricochets.

LEVEL 05 / COUNTERFLOW

NEW: Backward boost pad | Provisional par: 2 kicks | Difficulty: Easy-medium



INTENDED PLAY

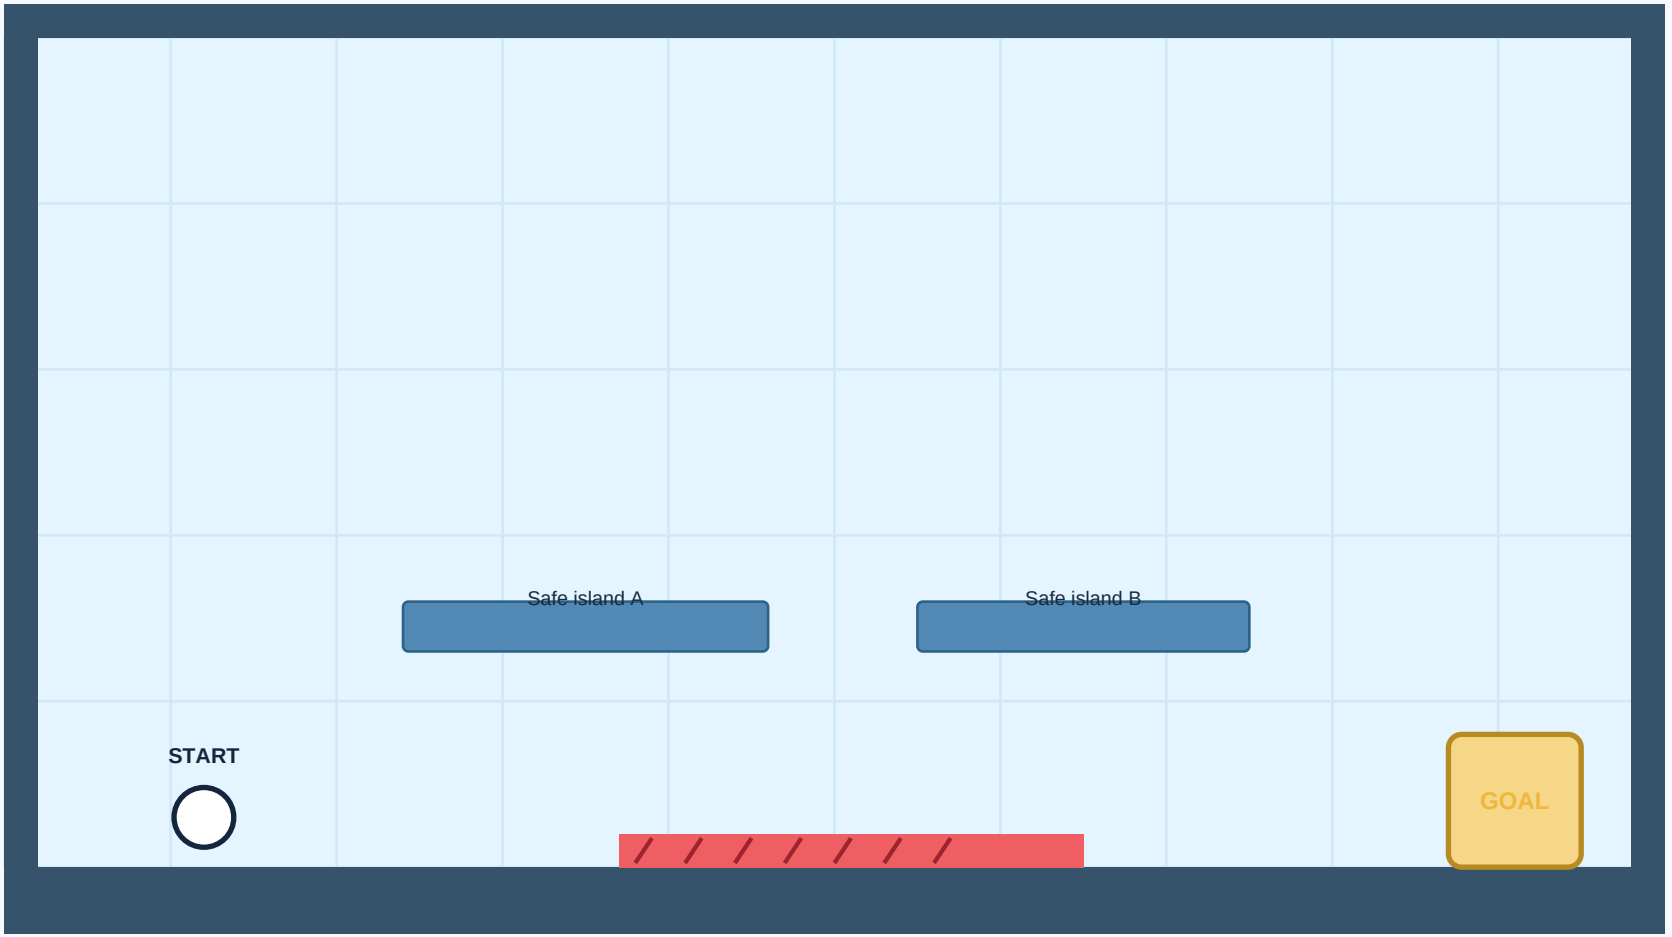
Player starts on the right and travels left through the underpass; the orange reverse pad helps push the ball toward the left goal.

DESIGN CHECK

Left-facing goal should register entries correctly. No ambiguity over the pad direction.

LEVEL 06 / RED ALERT

NEW: Red ball-loss pad | Provisional par: 2 kicks | Difficulty: Medium



INTENDED PLAY

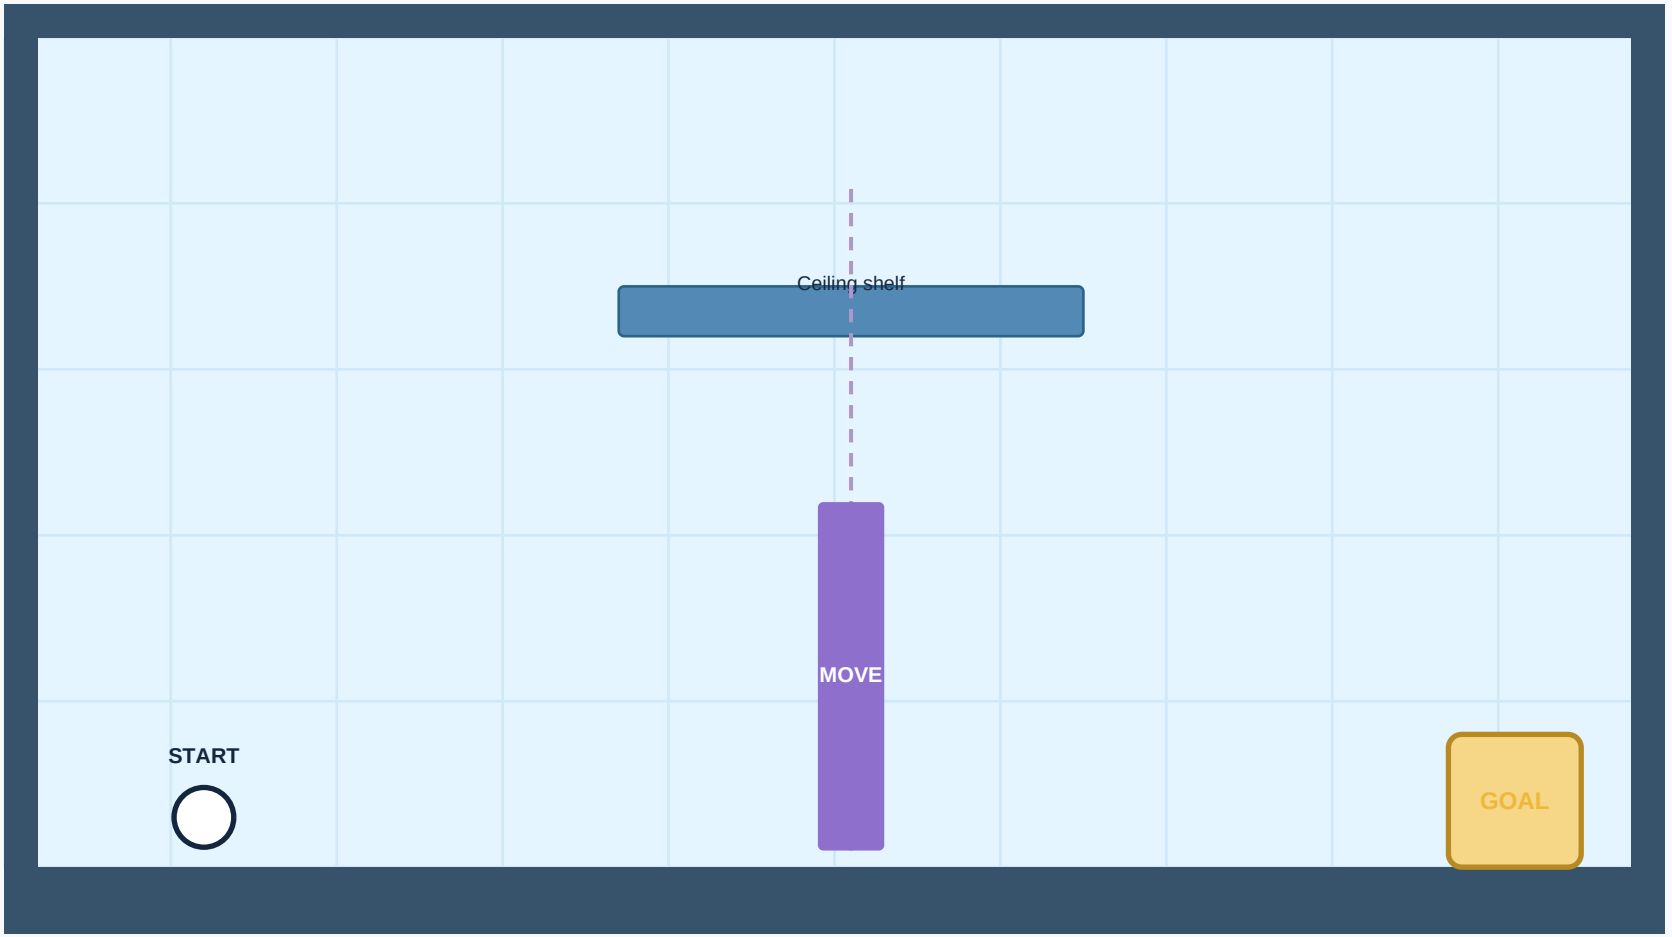
Cross the red floor strip with a lofted shot, optionally bouncing from raised safe islands.

DESIGN CHECK

No unavoidable deaths due to spawn placement; retry is instantaneous.

LEVEL 07 / THE WINDOW

NEW: Vertical moving obstacle | Provisional par: 2 kicks | Difficulty: Medium



INTENDED PLAY

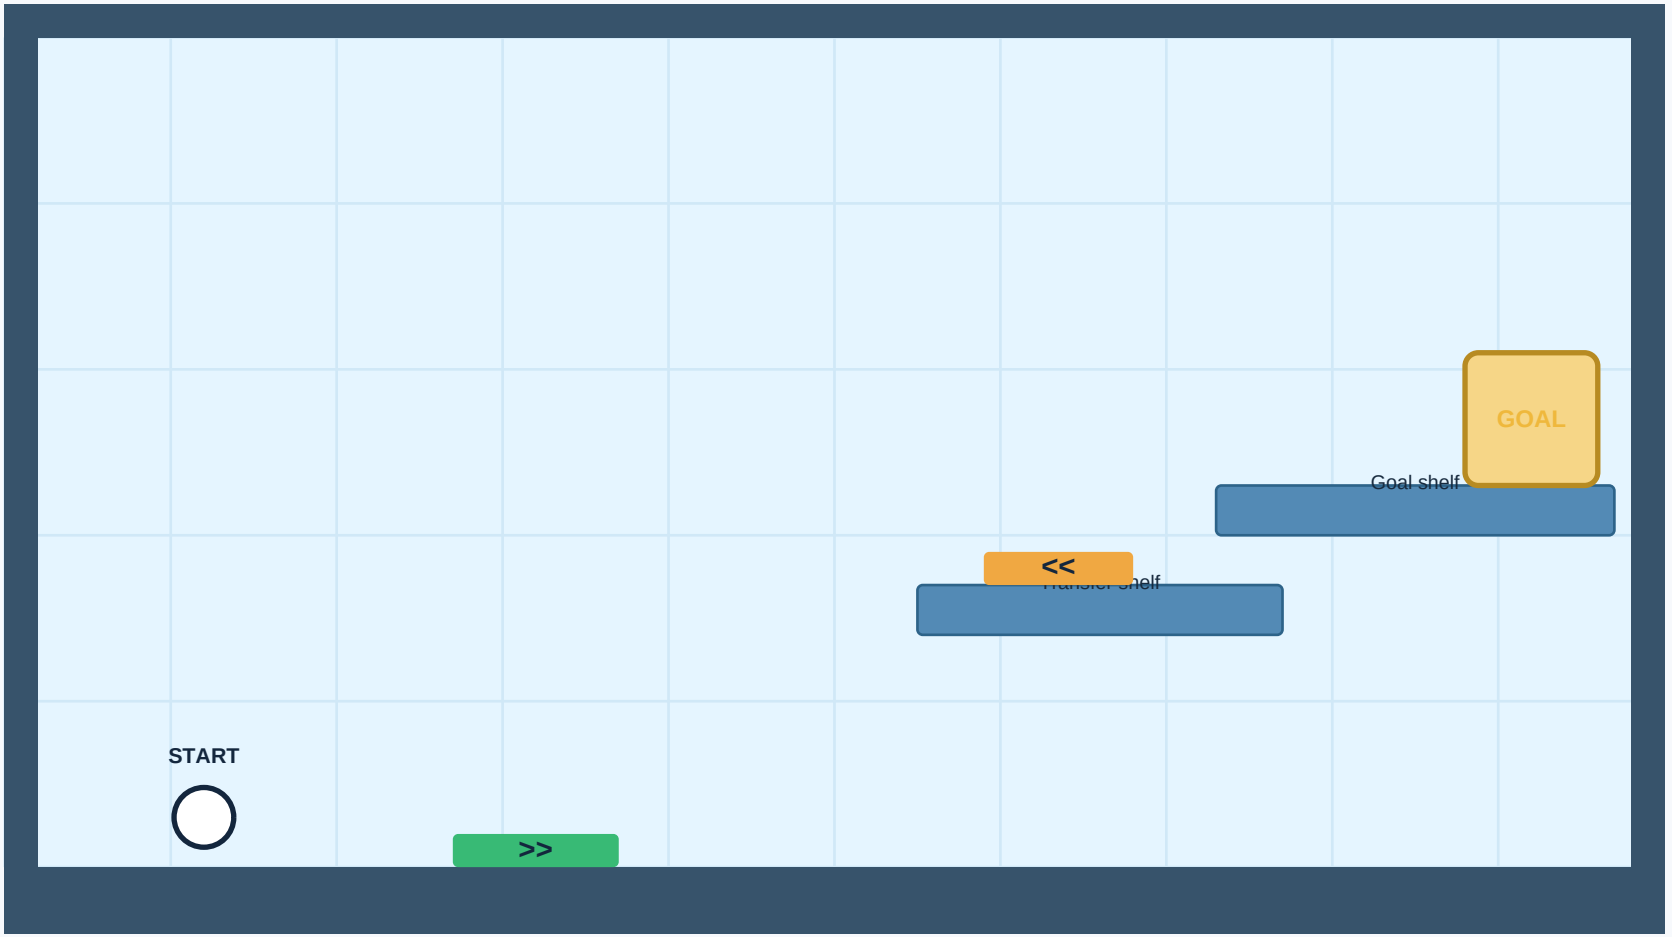
Observe the gate movement, then kick when the low corridor is open or arc above it.

DESIGN CHECK

Gate timing is fair; one near-miss should encourage a retry, not frustration.

LEVEL 08 / BOOST AND BRAKE

NEW: Forward and backward pads together | Provisional par: 3 kicks | Difficulty: Medium



INTENDED PLAY

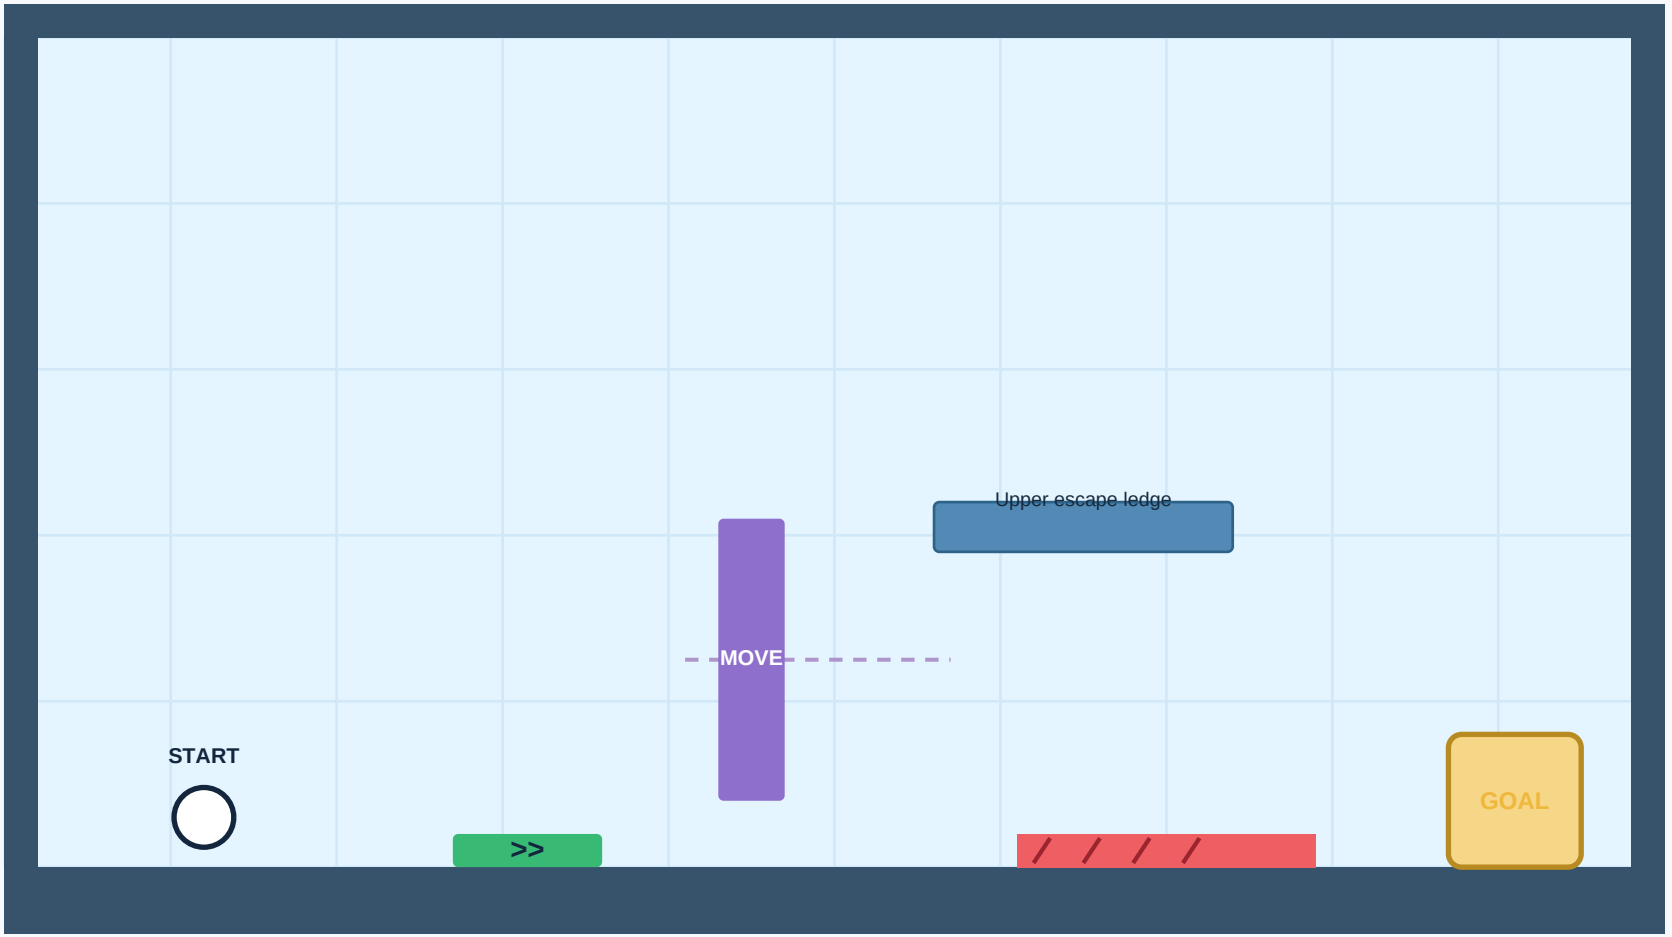
Accelerate early, then solve the elevated approach while accounting for a reverse pad on the transfer shelf.

DESIGN CHECK

There must be multiple possible recoveries; reverse-pad contact cannot softlock the ball.

LEVEL 09 / RED LIGHT, GREEN LIGHT

NEW: Moving sweeper plus forward boost plus red zone | Provisional par: 3 kicks | Difficulty: Medium-hard



INTENDED PLAY

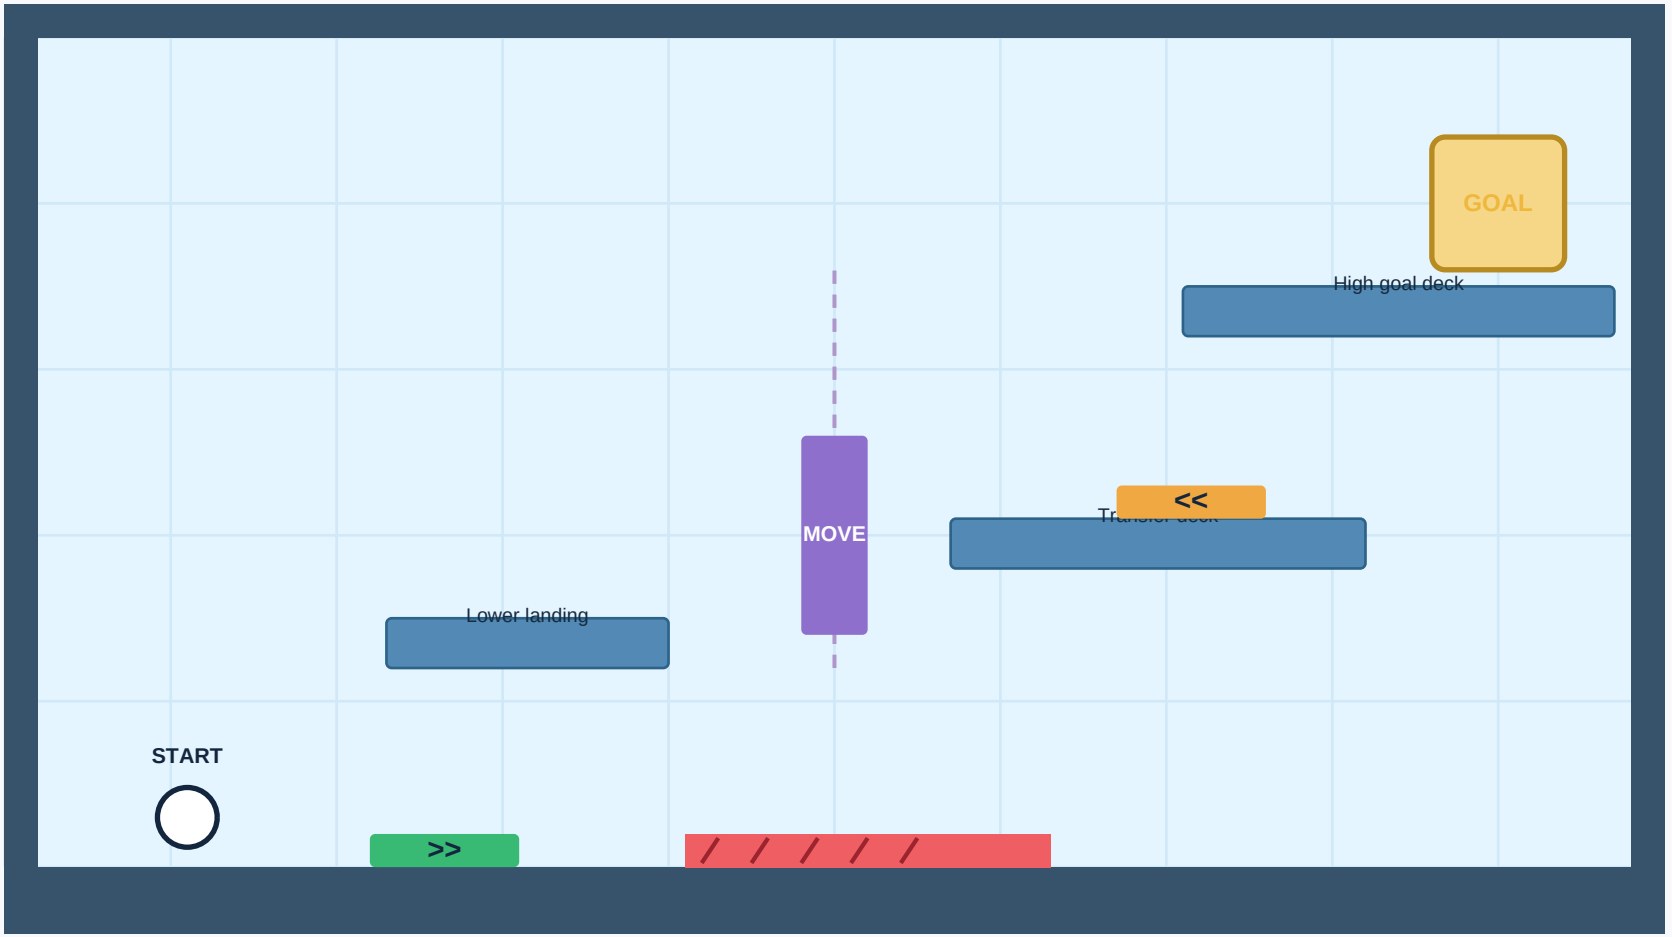
Use a boost, time movement past the sweeper, and clear the red section to finish.

DESIGN CHECK

No blind hazard, impossible deadline or mandatory rapid-fire input.

LEVEL 10 / THE FINAL TRICK

NEW: Mastery combination (no brand-new feature) | Provisional par: 3 kicks | Difficulty: Challenging



INTENDED PLAY

Reach the lower platform, clear a timed gate and a red reset zone, then climb to the elevated goal. Strong players optimise kick count.

DESIGN CHECK

3-star route must be demonstrated via playtest; an alternative multi-kick route must remain accessible.
