GOAL IN ONE

ARTWORK DIRECTION / APPROVED STYLE COMBINATION

Park & Treeline | Timber frame | Wooden obstacles | Green training goal

THE DECISION

Use the bright blue-sky park world, lush trees and grass, and glossy casual-game menus from the Park & Treeline concept. Replace the dark metal frame and ramp in that concept with the chosen timber frame and wooden obstacle treatments (shown on page 3).

ALL 20 EXISTING LEVELS

ARTWORK ONLY

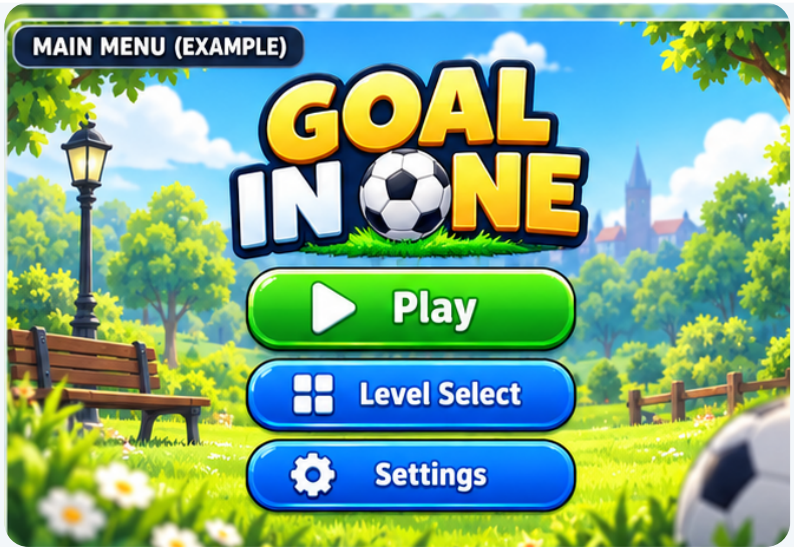

KEEP ORIGINAL GEOMETRY & PHYSICS

Park & Treeline: the overall look

Source: previous concept image - Version B

MAIN MENU + LOGO

LEVEL-SELECT STYLE

Exact selected components

These replace the metal versions in the Park & Treeline mock-up

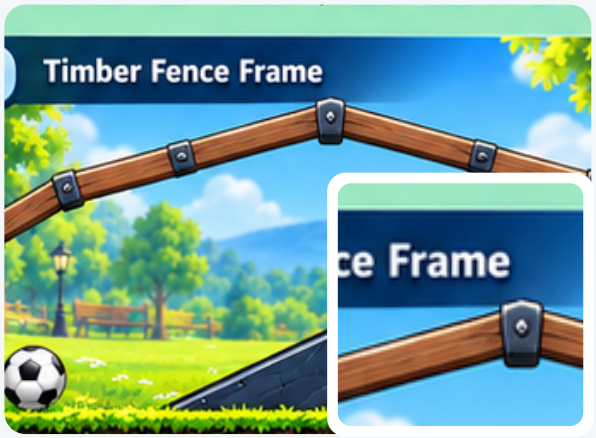

A3 / WOODEN OBSTACLES

Warm brown wooden plank surface, visible grain, bevelled edges and subtle metal fasteners. Build this treatment for wedges, ramps, blocks and moving hazards.

COPY ONLY: wooden obstacle material. Other components pictured are not selections.

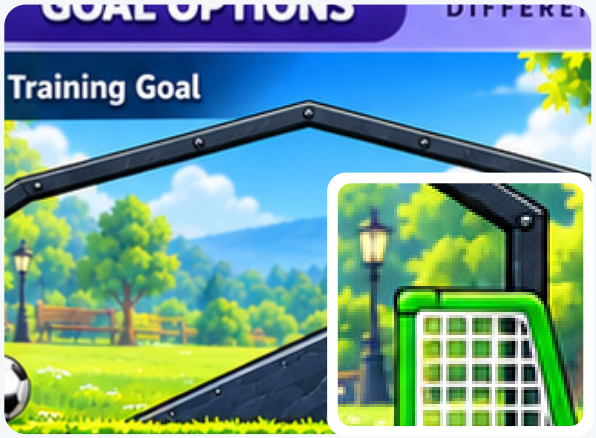

B2 / TIMBER FRAME

A continuous wooden beam boundary with dark metal joinery at angled corners. Apply to every enclosed arena edge and maintain crisp collision geometry.

COPY ONLY: timber arena beams and junctions. Do not copy the dark ramp.

C1 / GREEN TRAINING GOAL

Compact bright-green training goal, white netting and a slightly angled back. Goal is attached to and replaces a right-hand boundary segment.

COPY ONLY: green goal and net. Surrounding dark frame is superseded by timber.

IMPORTANT: These are independent selections from comparison images. The final game must combine A3 + B2 + C1 with the Park & Treeline world, even though each individual example still contains other unselected styles.

How to render the 20 levels

Design reference - not a level-layout specification

1 Background layers

Clear saturated blue sky; soft clouds; distant blue hills; mid-distance trees and park landscape; grassy foreground. Use parallax only if it does not affect readability.

2 Wooden obstacle system

Plank texture and warm amber-brown edges. Apply consistently to all solid obstacles, including moving blocks and ramps. Preserve each existing shape, size, angle and collider.

3 Ground and special pads

Grass fringe on the floor above a narrow dirt/soil base. Keep boost pads and red delete pads clearly colour-coded and readable, with effects that do not change behaviour.

4 Timber boundaries

Full arena perimeter made of joined brown beams, with brackets/joint plates at bends. Exact same physical paths as the current level geometry; no gaps or invisible visual mismatch.

5 Green training goal

Green metal frame, white mesh and slight perspective to net depth. Always integrated into the right-hand boundary for current levels; keep scoring trigger and entrance geometry intact.

6 Menu and HUD

Match the Park & Treeline image: glossy bright-green primary Play button, vivid blue secondary buttons, bold white/yellow logo, friendly rounded panels and clear 3-star progression tiles.

PALETTE GUIDE (APPROXIMATE)

Acceptance checklist

Apply to the current repository - do not reset or recreate the project

SCOPE / NON-NEGOTIABLES

- All 20 current levels remain available in the same order.
- Do not revert to 10 levels; do not regenerate level geometry.
- Maintain every ball spawn, obstacle path, ramp angle and goal placement.
- Retain right-boundary goals, collision boundaries and physics.
- Keep unlimited kicks, kicks while moving and scoring intact.

ASSET / ENGINEERING APPROACH

- Create reusable themed components rather than hand-drawing 20 scenes.
- Background imagery must not contain baked-in balls, goals or obstacles.
- Keep display art visually aligned with the existing physics shapes.
- Use crisp scalable art and correct rendering order at mobile sizes.
- Preserve 20-level progress data and 3-star menus.

VISUAL REVIEWS

- Capture gameplay screenshots of all 20 levels after the update.
- Compare environment, timber frame, wooden obstacles and goal to this PDF.
- Capture the main menu and level-select UI for review.
- Check landscape, desktop and narrow mobile aspect ratios.
- Check UI legibility and ensure scenery never obscures gameplay.

FUNCTIONAL VERIFICATION

- Build and run automated tests; manually inspect the game visually.
- Confirm goal entry, wall rebounds, ramps and moving obstacles.
- Confirm boost / delete pads, progress saving and star counts.
- Test repeated kicks while the ball is airborne or rolling.
- Report visually unverified items rather than claiming success.

DEFINITION OF DONE

Twenty recognisably unchanged levels, now rendered as a unified Park & Treeline world with timber arena frames, wooden obstacles, and right-edge green training goals. Clean previews and working gameplay, not just a passing build.
